1. Template

1.1. Código do Template

```

1 #include<bits/stdc++.h>
2
3 bool DEBUG = false;
4 // #define int long long
5 #define print if (DEBUG) std::cout <<
6 #define ff first
7 #define ss second
8 #define pii pair<int, int>
9 #define mp make_pair
10 #define pb push_back
11 #define vi vector<int>
12 #define INF (int)(1e9*2)
13 #define SYNC ios_base::sync_with_stdio(false), cin.tie(NULL), cout.tie(NULL)
14
15 using namespace std;
16
17 int32_t main() {
18     SYNC;
19     // Code
20     return 0;
21 }
```

2. Matemática

2.1. Geometria

3. Grafos

3.1. Componentes fortemente conexas (SCC)

```

1 void function() {
2     // code
3 }
```

3.2. Caminho Euleriano

```

1 list<int> cyc;
2 std::vector<pii> adj[MAX];
3 void euler_tour(list<int>::iterator it, int u) {
4     for (int j = 0; j < (int)adj[u].size(); j++) {
5         pii v = adj[u][j];
6         if (v.not_visited) {
7             adj[u][j].not_visited = false;
8             for (int k = 0; k < (int)adj[v.ff].size(); k++) {
9                 pii uu = adj[v.ff][k];
10                if (uu.ff == u && uu.not_visited) {
11                    adj[v.ff][k].not_visited = false;
12                    break;
13                }
14            }
15            euler_tour(cyc.insert(it, u), v.ff);
16        }
17    }
18 }
```

4. Programação dinâmica

4.1. Mochila

```

1  const int N = 2005;
2  int p[N], v[N];
3  int memo[N][N]; //memset(memo, -1, sizeof memo);
4  int mochila(int i, int j) {
5      if(i == 0) return 0;
6      if(memo[i][j] != -1) return memo[i][j];
7
8      // no colocar o item => mochila(i-1, j)
9      // colocar o item => mochila(i-1, j - p[i]) + v[i]
10     int res = mochila(i-1, j);
11     if(p[i] <= j) {
12         res = max(res, mochila(i-1, j - p[i]) + v[i]);
13     }
14
15     return memo[i][j] = res;
16 }

```

4.2. Moedas

```

1  void moedas(int argc, char const *argv[]){
2      int m, n;
3      cin >> m >> n;
4      while(m){
5          vector<int> array(m+1, 50001);
6          array[0] = 0;
7          for (int i = 0; i < n; ++i){
8              int valor;
9              cin >> valor;
10             for (int j = 0; j < m; ++j){
11                 if(array[j] != 50001 && j + valor <= m)
12                     if(array[j+valor] > array[j] + 1)
13                         array[j+valor] = array[j]+1;
14             }
15         }
16         if(array[m] < 50001){
17             cout << array[m] << endl;
18         }
19         else
20             cout << "Impossivel" << endl;
21         cin >> m >> n;
22     }
23 }

```

4.3. Troco

```

1  void troco(){
2      int v, m;
3      cin >> v >> m;
4      vector<int> moedas(v+1);
5      vector<int> entrada(m);
6      moedas[0] = 0;
7      for (int i = 1; i <= v; ++i) moedas[i] = -1;
8      for (int i = 0; i < m; ++i)
9          cin >> entrada[i];
10     for (int j = 0; j < m; ++j){
11         int a = entrada.back();
12         entrada.pop_back();
13         for (int i = v; i >= 0; --i){
14             if(moedas[i] >= 0 && (i + a) <= v){

```

```

15         if(moedas[i + a] == -1)
16             moedas[i + a] = 1;
17         else
18             moedas[i + a]++;
19     }
20 }
21
22 }
23 if(moedas[v] > 0)
24     cout << "S\n";
25 else
26     cout << "N\n";
27 }

```
